SUMMARY

Full-Stack and Mobile Engineer with 4+ years of experience building enterprise platforms, scalable APIs, and real-time applications using React, React Native, Node.js, Golang, PostgreSQL, and cloud-native infrastructure on GCP. Experienced in leading end-to-end product development, mentoring developers, improving engineering workflows, and delivering production-ready systems across enterprise and startup environments.

SKILLS

- **Frontend & Mobile:** React, React Native, Next.js, Expo, TypeScript, Vite
- **Backend:** Node.js, Typescript, Golang, Python, REST APIs, WebSockets, Authentication
- **Cloud & DevOps:** GCP, Docker, GitHub Actions, CI/CD, Kubernetes, Terraform
- **Databases:** PostgreSQL, MongoDB
- **Tooling & Monitoring:** Zod, React Hook Form, Husky, PostHog, Sentry
- **Architecture:** Monolithic Applications, Multi-tenant Systems, Real-time Systems
- **Practices:** Automated Testing, Code Reviews, Agile/Scrum
- **Languages:** Portuguese (Native), English (Fluent), Spanish (Intermediate)

EXPERIENCE

Grupo Malwee

Senior Software Engineer

Hybrid

July 2024 - Present

- Architected and developed a monolithic full-stack sales planning platform using React, Next.js, PostgreSQL, and GCP, supporting 200+ sales representatives.
- Centralized workflows from 3 legacy systems into a unified platform, improving sales target visibility and operational efficiency.
- Designed frontend architecture, backend services, database schemas, authentication flows, and CI/CD pipelines using GitHub Actions, Docker, and Kubernetes.
- Acted as a technical reference for the team, mentoring developers, supporting onboarding, and reviewing implementation and architectural decisions.
- Worked closely with product and business stakeholders to align technical implementation with operational requirements and platform scalability.
- Optimized CI/CD pipelines, reducing build times from 15 to 7 minutes and Docker image sizes from 1GB+ to 500MB.
- Implemented automated testing, Husky-based developer tooling, and engineering workflow improvements, increasing release reliability and onboarding efficiency.

WEG

Full-Stack Developer

Jaraguá do Sul, SC, Brazil

August 2022 - July 2024

- Architected a multi-tenant configurable monitoring platform used by 30+ industrial clients, replacing custom-built legacy implementations.
- Architected a low-code backend parametrization system using Node.js and MongoDB, achieving an 80% reduction in system startup times and onboarding friction.
- Built real-time monitoring interfaces using React, Vite, WebSockets, Zod, and React Hook Form.
- Optimized backend queries and API performance for data-intensive industrial monitoring workflows.

- Collaborated with cross-functional teams to define reusable technical standards and platform architecture.
- The platform architecture was later adopted as the foundation for additional enterprise solutions within WEG.

WEG

Quality Assurance Technician

Jaraguá do Sul, SC, Brazil

February 2020 - August 2022

- Collaborated with WEG Digital teams on IoT-connected monitoring systems, contributing to integrations between industrial hardware and software platforms.
- Performed quality assurance and connectivity testing for industrial electric panel systems, ensuring compliance with international standards.
- Supported international client inspections and technical validation processes in English.
- Developed internal testing procedures and automation tools, reducing operational turnaround time by 20%.

PROJECTS

Momentz

Founder & Lead Developer (Part-time)

Remote

2024 - Present

- Founded and developed a location-based social platform using React Native (Expo), Golang, PostgreSQL, WebSockets, and Oracle Cloud infrastructure.
- Implemented real-time chat systems, geolocation-based discovery, push notifications, and community features.
- Integrated authentication with Clerk and analytics/event tracking with PostHog.
- Leading integration of PIX split payments to support creator and community monetization features.
- Led product architecture, infrastructure deployment, analytics strategy, and mobile application development as sole technical founder.
- Acquired 300+ monthly active users during the initial product launch phase.

e-Con Bike

CTO & Co-Founder

Jaraguá do Sul, SC, Brazil

2020 - 2022

- Led development of a hardware/software mobility solution integrating ESP32 microcontrollers with user-facing applications.
- Built interfaces connecting embedded systems, telemetry, and mobile/web platforms.
- Achieved 1st place in the national INOVA innovation competition (2022).

EDUCATION

PUC Minas

Postgraduate Degree in Artificial Intelligence and Machine Learning

Remote

2025

UniSENAI

Bachelor in Control and Automation Engineering

Jaraguá do Sul, SC, Brazil

2018 - 2022

SENAI-CentroWEG

Technical Degree in Electronics

Jaraguá do Sul, SC, Brazil

2018 - 2020

CERTIFICATIONS

- Google Associate Cloud Engineer (**Expected 2026**)
